Insertion Anomaly

Can't Insert a Visit details that is with VisitNo unless the ProvNo is provided.

Example: For entering new Visit details like V82330, you should also enter Patient Number like P10 and ProvNo too.

Update Anomaly

Have to change multiple rows if the Patient moves to a different city,different PatZip,age changes.

Example: To update city of patient P1,two rows 1 and 2 need to be updated.

Delete Anomaly

Deleting a row of patient can cause deletion of provider details too.

Example:

Suppose we delete details of PatNo = P2, the last row is deleted that causes the

information about ProvNo = D3 to be lost too.
